[Chrisette Michele. I Am Full Album Zip](#)

To estimate the sum by using clustering,

Consider the following sum,

$$31 + 29 + 27 + 35 + 32$$

Since, clustering is useful with the sums that have addends close to value or when approximate average of numbers is easy to compute. Then, estimate the typical value of the numbers and then multiply by the amount of numbers.

Then, the approximate average of the numbers 31, 29, 27, 35 and 32 is 30

Since, there are 5 numbers in the sum

Then,

$$30 \times 5 = 150$$

Hence, the required sum by using clustering is about 150.
